Installing gcloud cli
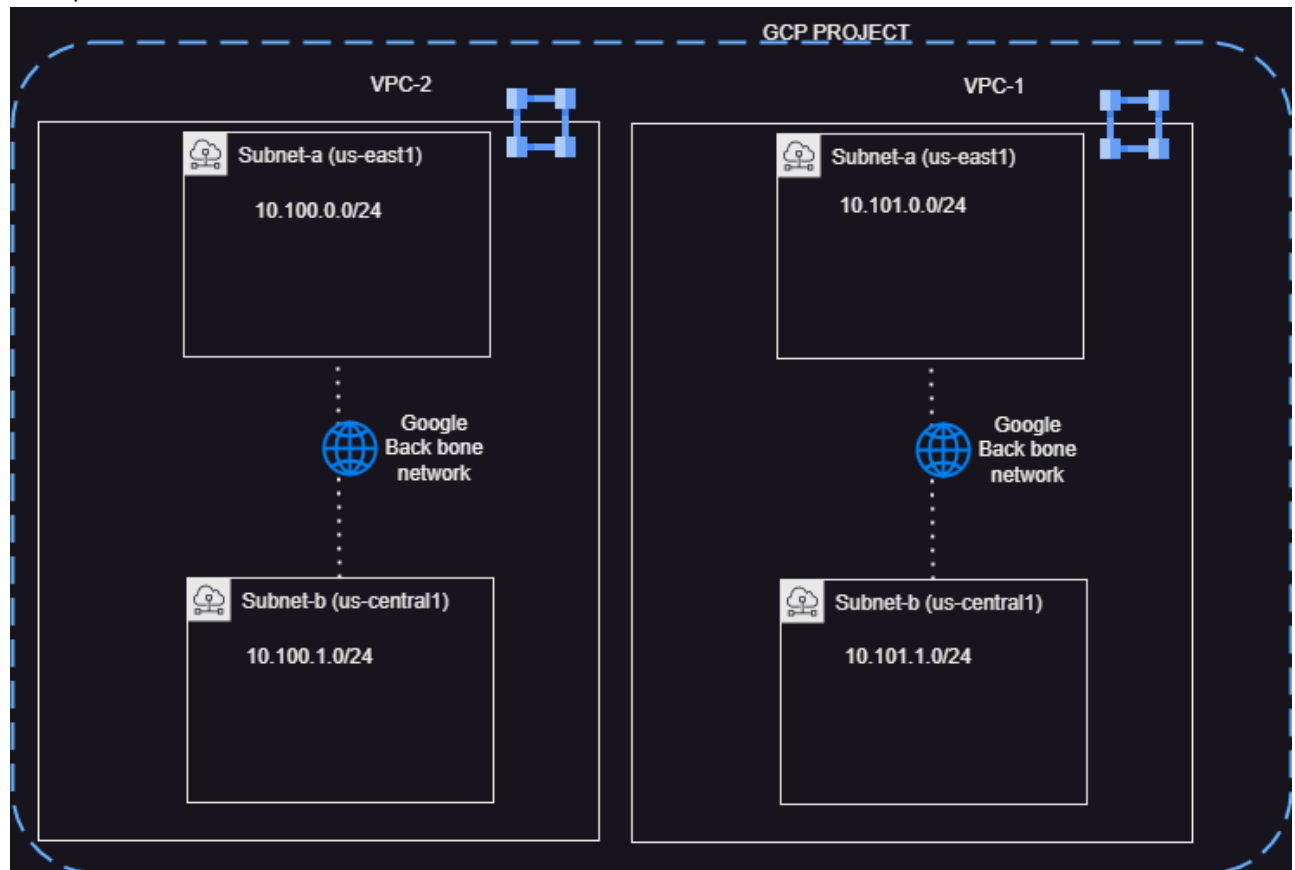

- Refer Here for the docs to install gcloud cli
- Refer Here for initialization or setting up gcloud cli

Google Cloud Networking

- The most important component of network architecture in the GCP is Virtual Private Cloud

- VPC networks are globbal resources i.e. a single vpc can span multiple regions without communicating over public internet

- VPC networks do not define IP address ranges, Instead each VPC Network is comprised of one or more partitions called subnets and each subnet defines one or more IP ranges

- Subnet are regional resources
