

## Private Links and Endpoints in AWS

- IN AWS services like Dynamo DB, S3 buckets will not be part of your vpc,
- So for the ec2 instances in your vpc connecting to these services will involve internet
- To solve this we have two options
  - endpoints:
    - Interface endpoints
    - Gateway endpoints

- Private Links

## Private endpoints in Azure

- [Refer Here](#) for official docs
- creating a private endpoint [Refer Here](#)
- creating a private link service [Refer Here](#)
